GENERAL EDITOR'S PREFACE

James J. Sosnoski

This will be the last issue of SCE Reports. Last December the Board of Directors decided to rename SCE's in-house journal. Starting this Winter, SCE will publish Critical Exchange [CEx]. The first issue will be devoted to this year's MLA session on literary change. It will reprint Professor Cohen's essay and include the commentaries of Professors Riffaterre, Schwartz, White, Flieger, Ford, Harkin and Jay.

Originally intended to be SCE's newsletter, SCE Reports has evolved into an "in-house" journal. The motive for renaming SCE-R is to acknowledge this change. In order to signal that "there remains a continuity" in this change, as Professor Cohen has put it, we will number the first issue of CEx "13." From time to time SCE will publish a newsletter, SCE News & Notices, which will be edited by Barbara Biesecker.

CEx 14 will publish the proceedings of SCE's "A Symposium with Fredric Jameson" which was held this last Fall in Oxford. It will feature Jameson's "The Ideology of Space" and will include commentaries on Jameson's work.

All future correspondence regarding CEx should be directed to:

GUEST EDITOR'S PREFACE

Susan Merritt Elliott

For two SCE special sessions at the MLA this year, I have formulated the topic "Literary Change/Critical Change," inviting Professor Ralph Cohen, of the University of Virginia, to present a position paper on this subject. The resulting paper, "A Prolegomenon for Literary Change," follows.

I have invited responses to the paper from Professors Michael Riffaterre, of Columbia University, Murray Schwartz, of the State University of New York at Buffalo, and Hayden White, of the University of California, Santa Cruz, for the first session.

For the second session, I have invited responses and discussion from Professors Jerry Aline Flieger, of Rutgers University, James E. Ford, of the University of Nebraska, Patricia Harkin, of Denison University, and Gregory Jay, of the University of Alabama.

Professor Cohen's paper presents a theoretical conception of change in literary study, giving specific illustrations of his conception from both literature and criticism so as to consider interrelationships between them. At the start of the paper, he observes that he finds no necessity to define "literary" in "literary change" for the purposes of his discussion. The notions of what is "literary" and what "critical," he seem to suggest, are themselves changing conceptions to which his notion of change applies.

I look forward to hearing the responses to Professor Cohen's paper. He will have an opportunity to respond to the responses given in session I, and afterwards there will be a discussion period. I have asked James Sosnoski to chair the second session, in which Professors Flieger, Ford, Harkin, and Jay will give their responses to the paper. Their comments may also include reactions to the remarks made earlier by speakers in the first session. A discussion period will follow this session too.
I wish in this short paper to touch on three aspects of literary change: (1) the nature of change; (2) the kinds of change; (3) explanations of change. I do not wish to debate the meanings of the term "literary," and I shall, therefore, assume that what is "literary" is what authors, critics, theorists have identified at the same time or at different times as "literary." The fact that such authorities may disagree about the significance of "literary" will in no way affect the inquiry I propose. My aim is to offer a propaedeutic for a study of literary change.

I. The Nature of Literary Change

Any discussion of literary change implies that there is a stable entity which can be divisible into parts. If a part of this entity changes, the gestalt can still be recognized; there remains a continuity which is necessary for change to take place. Change is opposed to the concept of changelessness on the one hand and differentness on the other. Changelessness undergoes no alteration of its parts. Differentness (and this applies to at least two events, situations, texts, etc.) refers to unrelated instances. Robert Nisbet puts it this way: "Change is a succession of differences in time in a persisting identity." And he goes on to say that "Only when the succession of differences in time may be seen to relate to some object, entity or being the identity of which persists through all the successive differences, can change be said to have occurred." Nisbet is referring to social change, and differences in time are necessary for change in society to take place. But if, for example, one discusses changes in the meaning of the word "wit" in the Essay on Criticism, the idea of time is of trivial importance: change of meaning here is not governed by time but by context. Different contexts, different meanings. This steers us at once to further discriminations. Semantic change need not imply change of concept. In fact, it indicates the variations that fall within the range of a single word. It is quite another case to consider period change or style change in which concepts undergo alteration despite the continuity that persists among parts of elements of a period or a "style." To relate literary change to concepts of thought and feeling or to forms of authorial and reader consciousness is to realize that literary change is connected with larger frameworks of change in nature and in man. Change is one of the ways in which we describe natural events: a seed "becomes" a seedling, a caterpillar "becomes" a butterfly; water "becomes" (changes into) steam. These are changes of shape with underlying identities. In the first two examples, we have a progress in which the change is seen to be inherent in the seed or in the stages of growth. In the third, the transformation retains the same chemical properties though these have turned from liquid to gas. Thus, the study of change in all these cases involves frameworks from botany or entomology or chemistry.

Consider the problem of identity and form change in mythological stories. Zeus, Hera, and other Greek gods and goddesses are constantly changing shape. Such form change, whatever its aim, is governed by a consciousness of the god's
power and the god's knowledge that whether he becomes a bird or a beast, he can return to his original form. In other words, the language, soul, or spirit retains an identity. In literary texts, transformations of shape that retain identity are common. We can see this clearly in Apuleius' story written in the second century A.D. of Lucius who is transformed into an ass though he continues to think in the language of a human being: "though I was no longer Lucius, and to all appearances a complete ass, a mere beast of burden, I still retained my mental faculties." Or consider the famous twentieth-century story which begins "As Gregor Samsa awoke one morning from uneasy dreams he found himself transformed in his bed into a giant insect." Gregor's shape has changed but he continues to think in human language and to be concerned about his human affairs.

My point is that change can be seen only against continuity, and in literary study, continuity can be studied only against or in contrast to change. The reason for this is that each literary text is always different from all others--no matter how slight the difference. However, the term "text" will not serve me in accounting for the kinds of change that I propose to discuss. What is needed is to redefine every literary "text" as a member of a genre. In doing so, it is possible to find that every text includes some elements from its generic past and others that relate to its synchronic present. Every text thus can be understood as multi-dimensional, possessing elements which constitute it as a member of one or more genres and which relate it to other texts in different genres.

I realize that numerous contemporary critics and theorists consider received generic classifi-
interpreted as belonging to more than one genre. Henry Fielding calls Joseph Andrews "a comic romance," which he defines as a "comic epic poem in prose; differing from comedy, as the serious epic from tragedy: its action being more extended and comprehensive; containing a much larger circle of incidents, and introducing a greater variety of characters." Relying on epic, comedy, and romance, this definition indicates that for Fielding the work possessed elements from all three genres that were combined in imitation of Don Quixote.

Without proceeding to a theory of genre, it may be appropriate to note that because genre has some continuity of elements and effects, it provides a basis for locating which elements have been changed or added or omitted. The term "genre" indicates the kind of changes it can deal with. The term has its source in the Latin "genus," which refers to "kind" or "sort" or "species" or "class." Its root terms are "genere," "gignere"--to beget and (in the passive) to be born. "Genre" can refer to a member of a class or a whole class; it can refer to how a class is constituted (the varied members); it can refer to a changing process, or to the members of a class as definite and unchanging, a product. It has the same root as "gender" and, in being related to gender, indicates the naturalistic distinctions that are implied. Genres have many elements in common but they do have distinct ends that change according to the historical situation.

If we consider the kind of changes that are generic, we note changes within a genre and changes between genres. Maria Corti puts it this way: "A genre may be transformed by itself from the inside by a change in the function of one of its constitutive elements, following which the
traits that are secondary in one era become primary in another; the genre reproduces like a microsystem those functional variations that generate the very movement of literature" and again "a genre is also transformed by changes in other genres in the literary system, which means that there cannot be a history of a genre in isolation; on the contrary, every phenomenon of correlation and influence must be considered." Any attempt to discuss change in a genre system, however, cannot avoid explanatory models from history or politics or anthropology or some other field in which change is a factor. But the subject matter of literature complicates the uses of any model. In any period there are texts from the past that are treated as present and living works, there are genres that have been disregarded or are minimally practiced, and there are genres that are dominant and those that are considered minor or short forms. Those that are part of the living literature form a hierarchy. The concepts that govern such a hierarchy will explain both the nature of the hierarchy and the values attributed to it. Thus, every text is an intersection of at least two systems: a diachronic generic system and a synchronic, hierarchical one.

Such systems are constructed by critics to explain continuities and discontinuities in relating particular works or groups of works to the kinds of changes that are posited. Are changes made consciously by authors or formulated by critics? To put the question in this way is to pose a separation that need not be honored. Since every text shares elements with others and introduces new elements, the issue of change is not properly discriminated by such differences.
Changes may be no more than variations of underlying period concepts of organization, philosophy, or language, and there is no necessary relation between a new genre and a new concept. A new genre such as the novel in the eighteenth century may conform to the concepts underlying the received genres, may, indeed, be no more than a variation of them. On the other hand, it is possible for Wordsworth correctly to claim that his rejection of eighteenth-century poetic language and the concepts of modification and epistemology underlying them leads to a new kind of poetic language and artistic vision.

The consciousness of change may apply to the individual writer, but the description of beginnings and endings of periods or movements are formulated after the fact by critics and scholars. These are fictions that depend on the critic’s view of what texts constitute a period and why he wishes to divide ongoing time in this particular manner. I shall return to these problems in my discussion of the explanations of change, but it is necessary to note here that the subject matters selected for change—as, for example, changing attitudes to women or the changing role of the father—can be derived from disciplines other than literature. In this sense, some inquiries into change result from knowledge of change developed in other areas such as psychoanalysis or linguistics or history. The pursuit of inquiries into literary change, therefore, has an element of the unpredictable, and, indeed, the multiplicity of instances that would be considered literary changes have yet to be charted.

Since change inevitably involves a relation with continuity, it will follow that discontinuities will entail the persistence of some larger entity. If there is a change in the diction of poetry, what persists is the relation of diction to thought or to poetic structure or to a speaker. If a particular genre like the sonnet is not written over a period of time, what persists is the relation of this omission to a poetic hierarchy or to the lyric poems that are written. And if a period ends and a new period begins, what persists is a hypothesis (or a theory) about the process of periodization or about the persistence of some elements or the discontinuity of others from one period to another.

The nature of literary change is thus a study of alterations which can only be understood in terms of the persistence of nonaltered elements of frameworks which provide an identity. Literary change is always connected with or characterized by concepts of knowledge, language, and structure that define some changes as variations of these and others as contradicting, rejecting, or overturning them. Change is then a form of adaptation or of “revolution.” But it is the nature of literary structures that change and persistence are present together. The kinds of relations between them account for the kinds of changes critics identify.

II. Kinds of Change

The kinds of change mentioned by critics are so varied that it seems difficult to organize them into coherent groups. Indeed, discussions of change occur in almost all texts although there seems little theoretical awareness of the problems involved. I shall focus on changes within a text (an instance of a genre), changes that apply to groups of texts (within one or more genres), and changes that are the result of the impact of non-
literary institutions and actions upon literary texts.

Within a single text we note the changes that take place in its production. This can involve a study of work sheets or revisions in which the changes are examined in terms of certain persistent elements. Such study may serve to reveal the adaptations appropriate to support or supplement or expand concepts governing a genre. Or it may indicate the network of elements from different genres with which a work is being connected. Whether in work sheets or in print, the revisions will be seen as trivial, as adapted to received concepts, or as resistant to them.

In this respect a generic theory will make it necessary to provide a revisionary vocabulary of generic change. If satires that are exemplary are seen by Dryden as heroic poems, this conceptual change is the result of redefining satire by including heroic elements in it. When Meyer Abrams describes the "greater Romantic lyric" as a development of the georgic descriptive poem, he must provide a series of revisionary or developmental procedures that can "transform" one kind of poem into another. And this must be a matter of the ratio of change to persistence of elements. The kind of change that an individual text undergoes can involve the placement of a sermon, for example, into the text of a novel—as in Tristram Shandy. The insertion of one genre into another so that the whole becomes a part implies the comprehensiveness of genres and may indicate the nature of a generic hierarchy. But can one genre be transformed into another? Can a sonnet be transformed into the greater Romantic lyric? Does the epic become transformed into the novel?

The transformation image in botany or chemistry presupposes that change is either an evolution of an identity or the retention of an identity in different form. In order to explain literary transformation as a change, for example, the critic needs to argue that the greater Romantic lyric is inherent in the georgic descriptive poem or that it is a member of the same family of genres. It might be possible to argue, for example, that the ten-line stanza that Keats developed for his odes is a variant of the sonnet form—a quatrains and a sestet instead of two quatrains and a sestet. But then one would have to argue that the sonnet and Keats' odes compose a family that displaces rather than transforms the georgic descriptive poem. Whatever similarities of imagery or rhetorical procedures the genres share, these are connections, not evolutionary developments.

Among the kinds of changes in literature are those that involve parody or burlesque of noncomic genres. In such conversions there may be an opposition or an attack upon the values attributed to the original text. But parodies often aim to draw attention to the values of the original by indicating the pleasures that can be taken in it. This is often the case with ballad parodies.

I have suggested that genre study seems to me the most adequate procedure for discussing change, but many of my colleagues prefer to consider texts as composed of words or sentences and consider genres as units resulting from these initial combinations. For such critics literary change becomes a consequence of changes in a linguistic code. Hayden White, basing his discussion of change in literary history upon Roman Jakobson's sixfold model of the literary field, remarks that
changes in the linguistic code will in turn be reflected in changes both in the cognitive content of literary works (the messages) and the modes of contact (genres) in which messages are transmitted and received. In this view the changes in language determine the kind of genres most appropriate for the changed messages: In a given period and place in history, the system of encodation and decodation permits the transmission of certain kinds of messages regarding one context and not others; and it will favor those genres adequate to the establishment of contacts between different points in the whole communication system represented by language in general. Significant periods of literary change will thus be signaled by changes in the linguistic code; changes in the code will in turn be reflected in changes in both the cognitive content of literary works (the messages) and the modes of contact (genres) in which messages are transmitted and received. Changes in the code, finally, can be conceived to be reflective of changes in the historico-natural context in which a given language game is being played.

Now this is an important hypothesis regarding the relation of "language" to genre. And it begins with the assumption that since language is a literary component shared by "the context, the audience, the artist, and the work alike," any statements about literary change must be related to "the more general field of linguistic transformation." What we have here is the claim that literary texts are read in language and written in language and that the system of encodation and decodation define the transmission or prohibition of messages.

Such a hypothesis seems to me to misconstrue the relation between language and genre. Although genres are language structures, they are not reducible to language nor are they merely reflections of changes in the language code. Because every text is an instance of a genre (at least one), genre as a structure always includes features that have continuity with the past—whether these are compositional or metrical or thematic, etc.—and features that are innovative. Genre by this definition is constituted by linguistic codes that are inconsistent in their implications; moreover, the reading by scholars of any past work involves the imposition of their own linguistic code upon a one of the past.

But in another sense, such a view of change overlooks the control a literary genre exercises upon the codes appropriate to it at any historical moment. The primacy of tragedy and comedy or of kinds of lyric poetry alters the conception of the codes appropriate to each genre. The choice of genre becomes not a linguistic act but a social one which determines the linguistic. If one takes a ballad like "The Ballad of Jane Shore" and converts it into a tragedy, the historical situation of the genre dictates that the characters will have to be elevated and the subject related to affairs of state. When a novel is converted into a film, it is self-evident that the visual imagery will dictate the possibilities of verbal transformation.

Consider one other valuable analysis of literary change, that of Michael Riffaterre. He finds that language forms a descriptive system "built of nouns, adjectives, ready-made sentences—clichés; stereotyped figures, arranged around a kernel work that fits a mental model of the reality represented by that word." Such systems function differently in different genres and at different times. Now Michael Riffaterre wishes to stress the language
system current at a particular time, and, indeed, he wisely urges its value in contributing to a more adequate study of historical analysis and change: "Style analysis should contribute to thematology in future by including all descriptive systems in these compilations arranged according to type, indicating their generic and chronological distribution."

Such a hypothesis of descriptive systems is transgeneric. It may be found in whatever genres are current at a particular time. But can we accept this version of continuity and change of a descriptive system within a genre without knowing its role in the structure of a genre? Do such systems arise exclusive of the genres in which they are found in order to fit some abstract mental model of reality? Does it not seem more likely that such systems would arise culturally as extrapolations from generic explanations? That such systems exist as abstractions providing only some similarities in any specific instance?

In order to describe the kinds of changes that exist among groups of genres, the critic must posit such abstract entities as norms, epistememes, periods, individual and period "styles," "modes of writing," etc. With regard to change, these groupings imply a systematic approach to literary study; they aim to locate similarities among diverse individual texts and to explain the changes that—-as a group—-such texts undergo. (Of course, the identification of texts as "literary" or "literature" belongs with inquiries about changes governing the nature of literary study.)

If we wish to discuss changes among "norms" or "periods," it will be apparent that the definition of what these are must precede any analysis of change pertinent to them. When Hukafovsky defined a norm as a publicly acknowledged goal with respect to which value is perceived as existing independently of an individual and his subjective decisions, he relied on a "so-called collective awareness." He realized there are not only competing norms, but that norms are constantly being undermined. The relation between norm continuity and discontinuity becomes too elusive to pursue and thus the beginnings and endings of norms, the numbers and kinds of works and elements involved become resistant to systematization. A much simpler procedure for dealing with norm change is offered by Thomas Kuhn, the historian of science. He tracks the beginning and ending of a scientific paradigm by referring to common institutional procedures used in educating scientists, to a practical institutional "norm."

Any application of Kuhnian "normal science" to literary study has to substitute concepts of generic expectations or common problem-solving for institutional practice. But because, in literary study, these are always multiple, the notion of a unified "norm" seems unusable. As for multiple norms, these seem to pose problems about their discontinuance.

Periods no less than norms are critical abstractions or fictions, and any attempt to explain period change must do so within a framework of persistence between periods. Does a period consist of "literary" texts written within a particular time span or of literary texts available in a time span or of those that writers and readers find valuable? In any time period there are texts composed in earlier times; are these to be considered part of the "period"? It is difficult to avoid the view
that texts which form part of a canon regardless of
when they were composed do indeed form part of a
period. This means that a period is multi-temporal
as well as multi-dimensional; the literary texts of
a period so understood will then be governed by
concepts of different chronological time. A change
of period will thus have to make reference to dif-
ferent rates of change and to different relations
among genres.

Because critics introduce period change in
order to explain large-scale or revolutionary
changes, or changes of literary hierarchies, they
tend to neglect the continuities. The strategy is
understandable, but it cannot lead to an adequate
study of conceptual change. Some literary unit
like genre is necessary to include continuity in any
discussion of change. Debates over the length of
time of periods or over the existence of periods--
whether there is an Age of Sensibility or whether it
is no more than the concluding thirty years of a
neo-classical period or whether we have entered a
post-modern period following modernism or are in
the concluding phase of modernism--are misplaced
because such determinations are not part of any
theory of change, only ad hoc claims for evidence
that is slanted to support one's hypothesis. They
are fictions that function to explain particular
changes: they do not explain the need, function,
and aim of such changes.

When discussions of periods are displaced by
discussions of receptions of literary texts, types
of change become primary. But even if we attribute
"receptions" to critics who express their views in
writing (in contrast to readers about whom the
critic can only speculate), the usefulness of such
reception depends on the kinds of explanations
offered.

III. Explanations of Change

Although I have divided my discussion into
"the nature of change," "the kinds of change," and
"explanations of change," I have done so merely
for strategic purposes: to open different aspects
of the question of literary change. It is appar-
ent that I have not hesitated to cross boundaries
and move among the three areas despite my emphasis
on a particular one. Description and explanation
are obviously intertwined even though Michel
Foucault in The Order of Things, for example,
tries to keep them separate and to resist method-
ological explanations in the empirical sciences:

The role of instruments, techniques, institu-
tions, events, ideologies, and interests
is very much in evidence; but one does not
know how an articulation so complex and so
diverse in composition actually operates.
It seemed to me that it would not be pru-
dent for the moment to force a solution I
felt incapable, I admit, of offering: the
traditional explanations--spirit of the
time, technological or social
changes, influences of various kinds--struck me for
the most part as being more magical than
effective. In this work, then, I left the
problem of causes to one side; I chose in-
stead to confine myself to describing the
transformations themselves, thinking that
this would be an indispensable step if
one day, a theory of scientific change
and epistemological causality was to be
constructed.\footnote{14}

He exaggerates his modesty, but his reference
to "spirit of the time, technological or social
changes, influences of various kinds" seems to be
quite distant from other contemporary explanations of literary change. These explanations begin with concepts of a literary text: a text which is a multi-dimensional system will inevitably possess some elements that are changing more rapidly than others. In fact, the changes will be recognized only in terms of continuities. Different rates of change will, of course, also apply to membership in a hierarchy of genres. I have offered as an explanation of this the notion that every literary text is inevitably different from any other in the same genre. Let me add here that these differences operate within a series of temporary possibilities.

So too, technological or social changes need not be disregarded. The closing of theaters certainly provides a reason for not writing dramas, just as the insistence by government on the writing of "social realism" threatens punishment to those who disregard this policy. Such social pressures, at the very least, explain the neglect of certain kinds of writing even if they do not explain those that are written. But the notion of "explanation" is at issue here, for if Foucault conceives of explanation in terms of causes, he will expect relations that historians will rarely be able to provide. Explanations in literary study are always made in terms of the aims of the explainer. To ask why a genre like the novel was introduced in the eighteenth century is to take for granted that the novel is a genre and that its novelty is a chance occurrence or the result of a series of writings that are intertextual with it. The term "introduction," therefore, conceals within it evolutionary or developmental categories which involve ratios of continuity and change or randomness or both.

At which point is the "cause" to be dis-covered? Does it not imply an originating moment when the particular originating work is not yet identified? Is it Robinson Crusoe or Moll Flanders or Pamela or Joseph Andrews? If the critic puts aside the notion of "cause" and substitutes probable reasoning or reason giving, he will introduce reasons about generic differentiations, about the relation of such differentiations to social attitudes, about the relation of this genre to a synchronic system, about the shifts in function to the elements that compose the genre.

Sociologists and anthropologists who discuss social change tend to use three explanatory procedures: evolution, revolution, and randomness. Social change thus is the result of certain developmental or evolutionary procedures. Evolution need not mean a movement from a lower to a higher stage but to a series of successive stages not unlike the charting of individual growth by Erik Erikson. Such developments are connected to particular social structures and the kinds of changes are identified as adaptations or adjustments. Those changes which result in reorganizations of the structure are revolutionary changes. As for randomness, it is an attempt to leave open the introductions of unexpected pressures -- whether legal, military, etc. -- upon the structure.

Explanations of literary change are often related to and sometimes dependent upon moral, social, political, and psychological concepts. The most elementary procedure here is to make literature reflective of such changes: a social or political change is posited and literature is claimed to mirror it. More sophisticated critics grant that literary language constitutes its world and they recognize that what they have to explain is a change in the manner of literary construction.
One of the ways in which this is done is to argue that changes in the external world result in changes in the psyche. Thus literary texts by revealing changes in consciousness reveal changes in the external world. This is Fredric Jameson's procedure:

An objective fragmentation of the so-called outside world is matched and accompanied by a fragmentation of the psyche which reinforces its effects. Such fragmentation, reification, but also production, of new semi-autonomous objects and activities, is clearly the objective precondition for the emergence of genres such as landscape, in which the viewing of an otherwise (or at least a traditionally) meaningless object—nature without people—comes to seem a self-justifying activity.15

The correlation is not merely reflective, for it involves the production of new semi-autonomous objects and activities. But the difficulty with this type of explanation is that by insisting on reification and fragmentation, it becomes the procedure it describes. It neglects the relation of continuity and the concepts that underlie it so that the relation of landscape poetry to pastoral and georgic forms from which it comes is suppressed or overlooked. And the role of nature as place as well as the connection of place to property and politics is misconstrued.

Since changes are of different kinds, it is obvious that explanations of them will be of different kinds. I mean by this that although all explanations will have to refer to evidence to support their claims and will need to specify the changes to which they refer, some changes are directly social while others are only remotely so. Some literary change is the result of imposing censorship where none previously existed, or the imposition of an index or a canon that undergoes change as a result of institutional decisions. So, too, the vocabulary of literary criticism becomes social at one time and scientific at another. The social vocabulary of "refinement" and "decorum" and "correctness" is clearly related to social behavior, that of "scientific," "evolutionary," or "developmental" much less so.

What do explanations of literary change explain? Any explanation will describe the kind of change that has taken place and will offer some historical clues for it. But no explanation by a modern critic of a past change avoids distortion. What we can do is to control the distortion by introducing generic elements stipulated by others from earlier times. Such continuities are not so much fused horizons as they are possibilities from which choices are made. But history is sometimes treated as though an element of past writing is always essentially the same, and the differences in time are trivial. When Paul de Man argues that the language of criticism and literature is permanently "unreliable"—"the most unreliable language in which man names and modifies himself"—he stresses the continuity, the persistent function of language.

If we wish to explain literary change, can we avoid the changing attitudes toward poetic language? And, of course, it will be remarked, can we avoid the changing attitudes toward genre? A theory of literary change should be able to explain such changes, but what is needed for such an explanation is a unit of analysis that will permit all such inquiries. I think that genre as I have been
using it can serve such a purpose. And it can
serve because a genre is a social as well as lit-
erary unit; thus it is subject to the acculturating
processes of language and of symbolic behavior. If
we accept the view that any example of a genre is a
combination of elements, then only some of these
undergo change; for, otherwise, how would it still
retain membership in a class? Therefore, we can
argue that every literary text is constituted by
elements that are in opposition or tension because
they are identified, at the very least, with dif-
ferent time schemes and the intersection of dia-
chronic and synchronic systems.

This phenomenon makes clear why beginnings
and endings of periods can only be tentative and
uncertain. In fact, the more extensive the change
to be explained, the more useful a system which
will control the explanation. It is always tempt-
ing to posit an essential continuity such as the
Oedipal conflict between strong poets of different
times while minimizing or ignoring other explana-
tory procedures. But if it is granted that genre
exercises control in constituting a text, no ex-
planation can neglect its function.

The theories of literary changes that I have
been discussing fall within the group of related
genres called literary history, literary criti-
cism, or literary theory. Those critics who find
only differences of degree—and not always these—
between the languages of criticism and poetry in-
sist on the fictive constructs of both. For them,
exploration is inevitably about themselves because
a literary genre theory is as self-reflexive as
poetry. If one argues that all writing is genre
bound, then a theory of change will deal not only
with the nature and kinds of change but with the
explanatory functions of each genre.

Theory and criticism are important today in
the hierarchy of genres because they function as
explanations of other genres and of themselves in
a society in which orality is competing with writ-
ing. At such a period in the history of culture,
efforts are made to consider exploration as forms
of pleasure and as instances of fictive construc-
tion. Thus, historical, critical, and theoretical
genres are seen as being constituted by their
own processes of explanation. And the boundaries
that separated these genres from those that were
traditionally constituted as fictions are in pro-
cess of erosion. A theory of literary change will
explain that such a shift in the generic hierarchy
and in the reconceptualizing of genres is a form
of resistance to and subversion of received as-
sumptions and practices of explanation. But not
all are subverted, and I have suggested that
genre procedures may well lead us to the con-
sciousness of literary change that we seek.
