

Contents

	<i>Preface</i>	<i>page 7</i>
1	Haar measure on the classical compact matrix groups	10
	1.1 The classical compact matrix groups	10
	1.2 Haar measure	16
	1.3 Lie group structure and character theory	26
2	Distribution of the entries	39
	2.1 Introduction	39
	2.2 The density of a principal submatrix	45
	2.3 How much is a Haar matrix like a Gaussian matrix?	50
	2.4 Arbitrary projections	60
3	Eigenvalue distributions: exact formulas	67
	3.1 The Weyl integration formula	67
	3.2 Determinantal point processes	77
	3.3 Matrix moments	86
	3.4 Patterns in eigenvalues: powers of random matrices	91
4	Eigenvalue distributions: asymptotics	95
	4.1 The eigenvalue counting function	95
	4.2 The empirical spectral measure and linear eigenvalue statistics	110
	4.3 Patterns in eigenvalues: self-similarity	117
	4.4 Large deviations for the empirical spectral measure	121
5	Concentration of measure	134
	5.1 The concentration of measure phenomenon	134
	5.2 Logarithmic Sobolev inequalities and concentration	136
	5.3 The Bakry-Émery criterion and concentration for the classical compact groups	143

6	<i>Contents</i>	
	5.4 Concentration of the spectral measure	155
6	Geometric applications of measure concentration	163
	6.1 The Johnson–Lindenstrauss lemma	163
	6.2 Dvoretzky’s theorem	168
	6.3 A measure-theoretic Dvoretzky theorem	173
7	Characteristic polynomials and the ζ-function	183
	7.1 Two-point correlations and Montgomery’s conjecture	183
	7.2 The zeta function and characteristic polynomials of random unitary matrices	187
	7.3 Numerical and statistical work	197
	<i>Index</i>	206
	<i>References</i>	207
