

Contents

1	Haar measure on the compact classical groups	3
1.1	Introduction	3
1.2	The compact classical matrix groups	3
1.3	Haar measure – definition and constructions	6
2	Distribution of the entries	16
2.1	Introduction	16
2.2	The density of a principle submatrix	22
2.3	How close is a Haar matrix to a Gaussian matrix?	26
2.4	A coordinate-free viewpoint	26
3	Distribution of the eigenvalues	31
3.1	The Weyl integration formula	31
3.2	Determinantal point processes	41
3.3	The eigenvalue counting function	53
3.4	Matrix moments and the empirical spectral measure	61
3.5	Patterns in Eigenvalues	62
4	Concentration of Measure	69
4.1	The concentration of measure phenomenon	69
4.2	Logarithmic Sobolev inequalities and concentration	70
4.3	Concentration of the spectral measure	75
5	Geometric applications	82
5.1	The Johnson-Lindenstrauss lemma	82
5.2	Dvoretzky’s theorem	86
5.3	A measure-theoretic Dvoretzky theorem	91
6	The characteristic polynomial and connections to the Riemann ζ-function	100
