Apple Software Collection Installation

OSX | iWork 09 | iLife 11

BASIC INSTALLER OPERATION

The installer you downloaded from the Software Center will let you choose between “Easy Installation”, where all three products are downloaded to your machine, or you may choose to install only one product. The installer may be rerun as often as desired to install additional products.

The installer is delivered from the Software Center as a .zip file. The Safari web browser should automatically unzip the installer and start it. You may also start the installer manually by looking for “Apple Software Collection” in your “Downloads” folder.

The “Apple Software Collection” installer can be found in the downloads folder after the installer is downloaded from the Software Center.
DETAILED INSTALLER INSTRUCTIONS

The Apple Software Collection installer will either auto-start after downloading from the Software Center or double-click on “Apple Software Collection” found in your downloads folder.

Select the destination drive and click “Continue” to go on.

“Easy Install” will install all products, or select individual products by clicking on the drop down box. Click “Install” to start installation.
Products are being downloaded. Please wait and do not disturb this process even though it may look like nothing is happening.

All products are copied to your “Users/Shared” folder. The iWork and iLife Installers will automatically start. The Mac OS X image file is supplied as a .dmg file which must be burned to a dual layer DVD. Please go to the detailed product installations sections below to install each product.
Double-click “Install iLife” to start the iLife installer.

This is the iLife 11 welcome screen. Click “Continue” to go on.
The product information screen is next. Press “Continue” to go on.

Please read the Software License Agreement and click “Continue” to go on.
You will be prompted to agree to the license agreement. Click “Agree” to go on.

Select a destination drive and click “Continue” to go on.
You may choose to customize your installation or click on “Install” to accept the default installation.

Installation is in progress. Please wait...
iLife installation is complete. Press “Close” to exit the installer.

iWork 09 INSTALLATION INSTRUCTIONS

Double-click “Install iWork 09” to start the iWork installer.
This is the iWork 09 welcome screen. Click “Continue” to go on.

The product information screen is next. Press “Continue” to go on.
Please read the Software License Agreement and click “Continue” to go on.

You will be prompted to agree to the license agreement. Click “Agree” to go on.
Select a destination drive and click “Continue” to go on.

You may choose to customize your installation or click on “Install” to accept the default installation.
Installation is in progress. Please wait...

iLife installation is complete. Press “Close” to exit the installer.
MAC OS X 10.6 SNOW LEOPARD INSTALLATION INSTRUCTIONS

To install the Snow Leopard upgrade you must either burn a DVD using a dual layer DVD burner, copy the .dmg image file to another disk partition that is bootable or create a boot partition on an external USB or Firewire drive. Please follow the instructions below for burning an installation DVD or creating an external drive boot partition.

HOW TO BURN A MAC OS X 10.6 INSTALLATION DVD

Open “Disk Utility”. Then open the “Shared” folder, usually found in the “Users” folder on your System drive. Find “OS X 10.6.dmg” and drag the file to the left window of Disk Utility.
In the “Disk Utility” window, highlight “OS X 10.6.dmg”. Then, click “Burn”.

Once you DVD is ready, reboot your machine from the DVD and follow the on-screen prompts.
1. Connect your external drive to your system.
2. Launch Disk Utility.
3. Open the “Shared” folder, usually found in the “Users” folder on your System drive. Find “OS X 10.6.dmg” and drag the file to the left window of Disk Utility as shown in Illustration A above.
4. Select “OS X 10.6.dmg” from the left panel. Of Disk Utility.
5. From the Disk Utility “Images” menu, select “Scan Image For Restore” to prepare the image for the later steps.
6. Select the External Firewire/USB device that you want to use as the boot drive for the upgrade as shown in Illustration B above.
7. Click “Partition” from the menu options.
8. Select 1 Partition, the click “Options” below the partition scheme.
9. Select the top option for “GUID Partition Table” – it MUST be GUID to be bootable!
10. Click OK to create the GUID partition. This will reformat the drive and all data on the drive will be lost.
11. Click the “Restore” tab within Disk Utility.
12. Select “OS X 10.6.dmg”.
13. After the restoration is complete, your GUID partition will now be bootable by Mac OS X.
14. Reboot the Mac, holding down the “Option” key to pull up the boot loader. Select the Snow Leopard install drive you just created rather than your default Mac OS hard drive.
15. Follow the on-screen prompts to install Mac OS X 10.6.
