

SAVE ON YOUR RX MEDICATIONS

iRx Program[®]

An integrated prescription program

Benefits to clients

Value-added benefit

iRx Program enhances member experience and includes no ongoing fees or charges to clients or members.

Reportable adherence data

Now capture member drug usage data for medications not covered by the funded benefit. Medications not covered by the plan benefit can undergo drug utilization review (DUR) and be used in other utilization management (UM) edits/programs.

Better health outcomes

With lower out-of-pocket costs, members are more likely to have prescriptions filled for medications not covered by the funded benefit, which can improve outcomes and reduce likelihood of additional care.

No separate drug card

iRx Program automatically takes effect when a program-eligible medication is not covered by the member's funded benefit.

Greater member satisfaction

Providing prescription savings increases member satisfaction.

Easy to use

The automated process means no supplemental discount information for pharmacists to enter; members receive the discounted price at the register.

Advantages to members

Easy to use

No paperwork is required to enroll. Members do not need multiple pharmacy savings cards.

Savings

Members save an average of 25% on prescribed medications.

There are no enrollment or maintenance fees.

No delays

Since the iRx Program is integrated into the existing pharmacy benefit, members save immediately at the register.

Convenient access

Members can go to any participating pharmacy within their existing retail network.
