

## **INTH 4002: Major Tropical Pathogens**

The Center for Global Health and Disease announces an elective in Major Tropical Pathogens (INTH 4002). There is little coverage of these important diseases in the regular curriculum despite their worldwide prevalence and importance. This elective is not designed to be exhaustive, but to introduce the major categories of pathogens, their epidemiology, their clinical presentation, diagnosis and treatment. The elective should be taken just for interest or in partial fulfillment of requirements for a Certificate in Global Health. [www.case.edu/orgs/cghd/training/certificate](http://www.case.edu/orgs/cghd/training/certificate)

The elective is 6-weeks long starting March 14, 2016, will meet on Mondays from 1:00-3:00 p.m., and ends on April 18, 2016. The last class is limited to 20 students unless access to more microscopes is obtained. The class meets on the 4th Floor of the Biomedical Research Building (BRB) in 433 Conference Room. Presentations will be mainly didactic, but some sessions may require student presentation or discussion. Weekly reading of 1-2 review articles prior to class is required.

This course is not a requirement for graduation in the MD Program for first and second year activity and will not appear on your transcript. Registration will require showing up and signing in. Successful completion requires attendance at 5 of 6 sessions. To register, please email Carmel Gambatese at [carmel.gambatese@case.edu](mailto:carmel.gambatese@case.edu).
