#### 4-point Likert Scale Questions – Overall Priorities and Differences by Neighborhood

Some of the responses needed to be recoded for Unified Polarity. Questions highlighted in red were flipped. For all questions higher scores are better scores. The lowest scores are the priority issues per the participants responses. Medians below 2 are highlighted, and of course the 5-point scale questions are not comparable. To evaluate when responses differed between the neighborhoods, we conducted Bonferroni Adjusted Kruskal Wallis Tests. In this approach, p-values less than 0.0009 indicated that the neighborhoods differed in their response to the question. These significant differences were used to flag problems that may require a distinct neighborhood level intervention (rather than a city uniform city or county wide intervention).
